

Day 1: Foundations – Breath & Gentle Sound

Goal: Activate breathing muscles and start vocal resonance gently.

1. Diaphragmatic Breathing (3 mins)

- Inhale through the nose for 4 seconds, expanding the belly (not chest).
- Hold for 2 seconds, then exhale on a “sss” sound for 6–8 seconds.
- Repeat 5–6 times.

2. Lip Trills (5 mins)

- Blow air through closed lips (like a horse sound) to make them vibrate.
- Add gentle pitch glides:
Low to high and high to low.
- Tip: Light pressure on cheeks helps maintain the trill.

3. Humming (5 mins)

- Keep lips closed, tongue relaxed.
- Hum gently on one note, then try short 3-note scales (e.g., Do-Re-Mi).
- Focus on vibration in face/lips.

4. Light Sirens (2 mins)

- On “ng” (as in "sing") or a lip trill, slowly glide from your lowest note to your highest and back down.

Day 2: Resonance & Range Expansion

Goal: Warm-up vocal cords gently while exploring vocal tone.

1. Breathing Review (2 mins)

- Same as Day 1, focus on control.

2. Lip Trills with Arpeggios (5 mins)

- Trill a 1-3-5-8-5-3-1 scale (e.g., C-E-G-C-G-E-C).
- Go up by half steps.

3. “Mmm” to “Ahh” Slide (4 mins)

- Start with a humming “mmm,” then open into “ahh” mid-note.

- Helps connect head/chest resonance.

4. 5-Tone Scale on “Gee” (5 mins)

- Sing “Gee Gee Gee Gee Gee” on a 5-note scale.
- Helps with brightness and articulation.

5. Cool Down – Soft Humming (2 mins)

- Gentle hum, low pitch. Focus on breath and relaxation.

Day 3: Pitch, Diction & Focus

Goal: Improve accuracy and articulation.

1. Breathing with “Shhh” (3 mins)

- Inhale for 4, exhale with a “shhh” for 8. Focus on steady release.

2. Tongue Twisters Spoken Then Sung (5 mins)

- Start slow:
“Red leather, yellow leather” or “Unique New York.”
- Say 3 times, then try singing on one note.
- Helps with clarity and agility.

3. 5-Tone Scale on “Noo” (5 mins)

- Gentle, nasal “noo noo noo noo noo.”
- Keep tone light and focused, pitch accurate.

4. Pitch Matching (3 mins)

- Use piano/keyboard or app: Match random single notes.
- Repeat and try to feel the internal pitch match.

5. Relaxation Hums (2 mins)

- Gentle hum, feeling resonance in face/head.

Day 4: Flexibility & Connection

Goal: Increase vocal agility and register transitions.

1. Breathing + Body Sigh (3 mins)

- Inhale deeply, exhale with an open “haaa” sigh from top to bottom.

2. Lip Trill Arpeggios (5 mins)

- Repeat from Day 2. Keep airflow even.

3. “Ng” Slides (4 mins)

- Sing “ng” (as in “sing”) while gliding up and down smoothly.
- Focus on connection between chest and head voice.

4. Octave Jumps on “Ya” (5 mins)

- Sing “ya” from low to high (1 to 8), then descend.
- Light, bouncy tone.

5. Gentle “Oo” Slides (2 mins)

- From head to chest voice – keep tone warm and connected.

Day 5: Putting It Together – Full Warm-up Routine

Goal: Use what you’ve learned in a full warm-up.

1. Breathing Review (3 mins)

- Include “shhh,” “sss,” and lip trills.

2. Lip Trill 5-Tone Scales + Arpeggios (5 mins)

- Combine scale and jump work for range and breath support.

3. Humming + “Mmm-Ahh” Slides (4 mins)

- Focus on resonance and smooth transitions.

4. 5-Tone Scales on Different Vowels (5 mins)

- “Gee,” “Noo,” “Mee,” “Mah” on different parts of the scale.

5. Cool Down: Soft Humming or “Oo” Glide (3 mins)

- Help relax the voice and prevent strain.

Tips for All Days:

- **Hydrate** before and after.
- Never **push** for high notes — keep it gentle.

- Practice in a quiet, focused space.
- Warm-ups are best done **daily** but especially before singing/speaking.
